Tytan Plow Combi

[Home](#) / [Products](#) / [Deep Plowers](#) / [Tytan Plow Combi](#)

Product characteristics

Tytan Plow Kombi deep plower is meant for deep cultivation. The deep plower ensures the soil is loosened without destroying its layer structure. Equipped with profiled tines with shear screws and hydraulic rear hook cat. II. It is available to be aggregated with other machines. Specifically designed frame allows connecting machines which require using a power take-off. It can be successfully used on light, heavy and stony soils.

The usage of Tytan Plow Combi

Loosening old tillage layers

Tramline system cultivation

Standard equipment

- Type "Michel" tines
- Hook cat. II / III
- Possibility to aggregate other machines
- Blue colour

Additional equipment

- Lighting with warning signs
- Custom painting
